Tactair Ready to Support Landing Gear Manufacturer for the AgustaWestland AW609 Program

NBAA, Las Vegas...Tactair Fluid Controls a leading designer, manufacturer and supplier of fluid power and motion control products and systems has dedicated resources to support AgustaWestland and the landing gear manufacturer on the AW609 program.

Tactair's ship set of components for the AW609 include the wheel brake controls (master cylinders, reservoir, park brake valve), the landing gear/door control manifold, emergency back-up valve, and the nose wheel viscous shimmy damper.

Tactair Fluid Controls Inc. is a subsidiary of Young & Franklin Inc. of Liverpool, New York. Tactair designs and manufactures fluid power and motion control products for brake, landing gear, nose wheel steering, flight control, engine/nacelle control and utility control systems for fixed and rotary wing aircraft, naval service vehicles and land combat vehicles.
