Tactair to Supply Messier-Bugatti-Dowty Hydraulic Landing Gear Control Valves for New High End Business Jet Family

Liverpool, NY- October 21, 2013 - Tactair Fluid Controls Inc. announces the award of a contract from Messier-Bugatti-Dowty to design and manufacture landing gear extension and retraction and nose wheel steering selector valves for the landing gear system of two new business aircraft which are currently under development.

Each shipset consists of 6 unique valves (8 in total) including landing gear/door control solenoid valves, steering selector solenoid valve, and manually operated alternate extension valves.

Tactair Fluid Controls Inc. is a subsidiary of Young & Franklin Inc. of Liverpool, New York. Tactair designs and manufactures fluid power and motion control products for brake, landing gear, nose wheel steering, flight control, engine/nacelle control and utility control systems for fixed and rotary wing aircraft, naval service vehicles and land combat vehicles. For more information, visit Tactair's new website: www.tactair.com.
